Table

Table The DataGridComponent provides a comprehensive data table solution with advanced features including sorting, filtering, custom cell templates, and responsive design. It uses a flexible column definition system with content projection for maximum customization. How to use ■ Import the component and its directives, then define your table structure with custom templates. import { AavaDataGridComponent , AvaColumnDefDirective , AvaHeaderCellDefDirective , AvaCellDefDirective , AavaTagComponent , } from "@aava/play-core" ; Basic Usage ■ Simple table with basic data display and column definitions. Angular Preview Code < div class = " demo-page " > <!-- Demo Content --> < div class = " demo-content " > < div class = " container " > <!-- Employee Table Section --> < div class = " demo-section " > < div class = " table-container " > < aava-data-grid [dataSource] = " basicData " [displayedColumns] = " displayedColumns " class = " styled-data-grid " > < ng-container avaColumnDef = " name " > < ng-container *avaHeaderCellDef > < div class = " header-cell " > < span class = " header-text " > Employee Name </ span > </ div > </ ng-container > < ng-container *avaCellDef = " let row " > < div class = " data-cell name-cell " > < span class = " employee-name " > {{ row.name }} </ span > </ div > </ ng-container > </ ng-container > < ng-container avaColumnDef = " email " > < ng-container *avaHeaderCellDef > < div class = " header-cell " > < span class = " header-text " > Email Address </ span > </ div > </ ng-container > < ng-container *avaCellDef = " let row " > < div class = " data-cell email-cell " > < span class = " email-text " > {{ row.email }} </ span > </ div > </ ng-container > </ ng-container > < ng-container avaColumnDef = " department " > < ng-container *avaHeaderCellDef > < div class = " header-cell " > < span class = " header-text " > Department </ span > </ div > </ ng-container > < ng-container *avaCellDef = " let row " > < div class = " data-cell department-cell " > < span class = " department-badge " > {{ row.department }} </ span > </ div > </ ng-container > </ ng-container > < ng-container avaColumnDef = " status " > < ng-container *avaHeaderCellDef > < div class = " header-cell " > < span class = " header-text " > Status </ span > </ div > </ ng-container > < ng-container *avaCellDef = " let row " > < div class = " data-cell status-cell " > < aava-tag [label] = " row.status " [color] = " getStatusColor(row.status) " size = " sm " > </ aava-tag > </ div > </ ng-container > </ ng-container > </ aava-data-grid > </ div > </ div > </ div > </ div > </ div > basicData = [{ id : 1 , name : 'Alice Johnson' , email : 'alice.johnson@example.com' , department : 'Engineering' , status : 'Active' , } , { id : 2 , name : 'Bob Smith' , email : 'bob.smith@example.com' , department : 'Marketing' , status : 'Active' , } , { id : 3 , name : 'Carlos Martinez' , email : 'carlos.martinez@example.com' , department : 'Sales' , status : 'Pending' , } , { id : 4 , name : 'Diana Lee' , email : 'diana.lee@example.com' , department : 'Engineering' , status : 'Inactive' , } , { id : 5 , name : 'Ethan Brown' , email : 'ethan.brown@example.com' , department : 'HR' , status : 'Active' , } ,] ; displayedColumns = ['name' , 'email' , 'department' , 'status'] ; /** * Get the appropriate color for status tags */ getStatusColor (status : string) : 'success' | 'warning' | 'error' | 'info' | 'default' { switch (status .

toLowerCase ( )) { case 'active' : return 'success' ; case 'pending' : return 'warning' ; case 'inactive' : return 'error' ; default : return 'default' ; } } Sorting ■ Table with sortable columns and visual sort indicators. Angular Preview Code < div class = " demo-content " > < div class = " demo-section " > < div class = " demo-card " > < div class = " card-content " > < aava-data-grid [dataSource] = " employeeData " [displayedColumns] = " displayedColumns " > < ng-container avaColumnDef = " name " [sortable] = " true " > < ng-container *avaHeaderCellDef > Employee Name </ ng-container > < ng-container *avaCellDef = " let row " > {{ row.name }} </ ng-container > </ ng-container > < ng-container avaColumnDef = " position " [sortable] = " true " > < ng-container *avaHeaderCellDef > Position </ ng-container > < ng-container *avaCellDef = " let row " > {{ row.position }} </ ng-container > </ ng-container > < ng-container avaColumnDef = " salary " [sortable] = " true " > < ng-container *avaHeaderCellDef > Annual Salary </ ng-container > < ng-container *avaCellDef = " let row " > ${{ row.salary | number }} </ ng-container > </ ng-container > < ng-container avaColumnDef = " experience " [sortable] = " true " > < ng-container *avaHeaderCellDef > Experience (Years) </ ng-container > < ng-container *avaCellDef = " let row " > {{ row.experience }} years </ ng-container > </ ng-container > < ng-container avaColumnDef = " joinDate " [sortable] = " true " > < ng-container *avaHeaderCellDef > Join Date </ ng-container > < ng-container *avaCellDef = " let row " > {{ row.joinDate | date }} </ ng-container > </ ng-container > < ng-container avaColumnDef = " department " > < ng-container *avaHeaderCellDef > Department </ ng-container > < ng-container *avaCellDef = " let row " > {{ row.department }} </ ng-container > </ ng-container > </ aava-data-grid > </ div > </ div > </ div > </ div > employeeData = [{ id : 1 , name : "Alice Johnson" , position : "Senior Developer" , salary : 95000 , joinDate : "2020-03-15" , experience : 8 , department : "Engineering" , } , { id : 2 , name : "Bob Smith" , position : "Marketing Manager" , salary : 75000 , joinDate : "2019-07-22" , experience : 6 , department : "Marketing" , } , { id : 3 , name : "Carlos Martinez" , position : "Sales Representative" , salary : 55000 , joinDate : "2021-11-08" , experience : 3 , department : "Sales" , } , { id : 4 , name : "Diana Lee" , position : "UX Designer" , salary : 70000 , joinDate : "2020-09-12" , experience : 5 , department : "Design" , } , { id : 5 , name : "Ethan Brown" , position : "Data Analyst" , salary : 65000 , joinDate : "2022-01-30" , experience : 2 , department : "Analytics" , } , { id : 6 , name : "Fiona Green" , position : "Project Manager" , salary : 85000 , joinDate : "2018-05-10" , experience : 9 , department : "Operations" , } , { id : 7 , name : "George Wang" , position : "DevOps Engineer" , salary : 90000 , joinDate : "2019-12-03" , experience : 7 , department : "Engineering" , } , { id : 8 , name : "Hannah Kim" , position : "Content Writer" , salary : 45000 , joinDate : "2021-08-15" , experience : 1 , department : "Marketing" , } ,] ; displayedColumns = ["name" , "position" , "salary" , "experience" , "joinDate"] ; salesData = [{ month : "January" , revenue : 125000 , orders : 340 , conversion : 3.2 } , { month : "February" , revenue : 135000 , orders : 385 , conversion : 3.8 } , { month : "March" , revenue : 142000 , orders : 420 , conversion : 4.1 } , { month : "April" , revenue : 128000 , orders : 365 , conversion : 3.5 } , { month : "May" , revenue : 155000 , orders : 445 , conversion : 4.3 } , { month : "June" , revenue : 168000 , orders : 478 , conversion : 4.6 } ,] ; salesColumns = ["month" , "revenue" , "orders" , "conversion"] ; Filtering ■ Advanced filtering capabilities with multiple filter conditions and operators. Angular Preview Code Features ■

Flexible Column System ■ Content projection-based column definitions Custom header and cell templates Configurable sorting and filtering per column Dynamic column visibility Advanced Sorting ■ Multi-column sorting support Visual sort indicators (ascending/descending) Configurable sort behavior per column Sort state management Powerful Filtering ■ Multiple filter conditions and operators Real-time filtering with search Filter panel with advanced options Clear and apply filter actions Custom Templates ■ Flexible cell content templates Custom header templates Template context with row data and index Support for complex cell content Responsive Design ■ Horizontal scrolling for wide tables Mobile-friendly design Adaptive column sizing Touch-optimized interactions Performance Optimized ■ OnPush change detection strategy Efficient data handling Optimized rendering Memory management API Reference ■ Inputs ■ Property Type Default Description dataSource any[] [] Array of data objects to display in the table displayedColumns string[] [] Array of column names to display Outputs ■ Property Type Description dataSorted EventEmitter<any[]> Emitted when data is sorted with sorted data Directives ■ AvaColumnDefDirective ■ Property Type Default Description avaColumnDef string - Column name/identifier (required) sortable boolean false Enable sorting for this column filter boolean false Enable filtering for this column AvaHeaderCellDefDirective ■ Property Type Description Template TemplateRef<any> Template for custom header cell content AvaCellDefDirective ■ Property Type Description Template TemplateRef<any> Template for custom cell content with context Interfaces ■ interface FilterCondition { label : string ; // Display label for filter condition value : string ; // Value for filter condition } Methods ■ Method Parameters Description onSort() column: AvaColumnDefDirective Handle column sorting applySort() None Apply current sort to data applyFilter() columnName: string, event: Event Apply filter to specific column clearFilter() columnName: string, event: any Clear filter for specific column openPanel() columnName: string, event: any Open filter panel for column checkForOpen() columnName: string Check if filter panel is open for column Properties ■ Property Type Description sortColumn string | null Currently sorted column sortDirection 'asc' | 'desc' | '' Current sort direction sortedData any[] Currently sorted and filtered data filterColumn Array<{column: string, type: string, value: any, open: boolean}> Active filters defaultFilterConditions FilterCondition[] Available filter conditions CSS Custom Properties ■ The component uses CSS custom properties for dynamic styling: Container Properties ■ Property Description --grid-font-family-body Font family for table content --grid-text-color Text color for table content --grid-background-color-odd Background color for odd rows --grid-background-color-even Background color for even rows --grid-border Border color for grid elements Table Properties ■ Property Description --table-border Border color for table elements CSS Classes ■ The component uses CSS classes for styling and state management: Container Classes ■ Class Description .ava-data-table-wrapper Main table container .data-table-wrapper Inner table wrapper with scrolling .ava-data-table Main table element Cell Classes ■ Class Description .cell-wrapper Header cell content wrapper .grid-column-container Column header container .filter Filter icon container .filter-wrapper Filter panel container .default-filter-actions Filter action buttons container .cell-link Link styling within cells State Classes ■ Class Description .sort-icon Sort indicator icon Various pseudo-classes Hover and focus states

Best Practices ■ Data Structure ■ Use consistent data structure across all rows Ensure column names match displayedColumns array Provide meaningful default values for missing data Optimize data for sorting and filtering Column Definitions ■ Use descriptive column names Enable sorting only for relevant columns Enable filtering for searchable data Provide meaningful header labels Custom Templates ■ Keep cell templates simple and focused Use template context for row data access Implement proper error handling in templates Consider accessibility in custom content Performance ■ Limit data size for optimal performance Use OnPush change detection strategy Implement virtual scrolling for large datasets Optimize filter and sort operations Accessibility ■ Provide proper ARIA labels Ensure keyboard navigation support Use semantic HTML structure Maintain color contrast ratios Responsive Design ■ Test table on various screen sizes Implement horizontal scrolling for wide tables Consider mobile-specific interactions Optimize touch targets for mobile Accessibility ■ ARIA Support ■ Proper table semantics Sort and filter announcements Screen reader friendly navigation Status updates for dynamic content Keyboard Navigation ■ Tab navigation through table elements Arrow key navigation between cells Enter/Space activation for actions Escape key for closing panels Focus Management ■ Clear focus indicators Logical tab order Focus restoration after actions Focus trapping in modals/panels Screen Reader Support ■ Descriptive labels for actions Context information for data Status announcements Clear navigation structure Browser Support ■ Modern Browsers : Full support for all features CSS Grid/Flexbox : Required for layout ES6+ Features : Required for component functionality Template Ref : Required for content projection Change Detection : OnPush strategy support
