

Maps and navigation page

Map and Navigation Page This document aims to define the functionality and structure required to develop a Map and Navigation Page in a web application. The Map and Navigation Page integrates map functionalities and provides users with navigation features.

Overview

- The Map and Navigation Page serves as a platform for users to interact with maps, view locations, get directions, and utilize navigation functionalities within the application.

The Map and Navigation Page will consist of the following components:

- Displays an interactive map interface using a mapping library (e.g., Google Maps, Mapbox).
- Shows geographical locations, markers, and provides navigation controls.
- Includes a search bar or input field allowing users to search for specific locations or addresses on the map.
- Provides functionalities for users to get directions from one location to another.
- Offers options for selecting transportation modes (e.g., driving, walking, public transit).

Acts as the main container, rendering `MapDisplayComponent`, `LocationSearchComponent`, `DirectionsComponent`, and other relevant components. Manages the layout, interactions, and data flow within the Map and Navigation Page.

Functionality:

- **Display Map and Locations**
- **Renders** an interactive map allowing users to view geographical locations, markers, and navigation controls.
- **Location Search**
- **Enables** users to search for specific locations or addresses and displays them on the map.
- **Get Directions**
- **Provides** functionalities for users to get directions from one location to another.
- **Displays** route options, distances, estimated travel times, and turn-by-turn navigation.

Testing:

- Conducts unit tests for each component and functionality.
- Ensures accurate display and functionality of the map, location search, directions, and navigation features.
- Verifies responsiveness and smooth interactions within the Map and Navigation Page.

Future Enhancements:

- Implement real-time traffic updates and alternate route suggestions.
- Introduce geolocation services for current user location identification.
- Include additional map layers or overlays for enhanced information display.

Conclusion:

- The Map and Navigation Page provides users with an interactive and user-friendly interface to explore maps, search for locations, get directions, and utilize navigation features within the application.
