

Progress Bar

Progress Bar The `<aava-progressbar>` provides a comprehensive progress indicator solution with both circular and linear variants. It supports multiple modes including determinate, indeterminate, buffer, and query states, with smooth animations, customizable colors, and full accessibility support.

How to use

- Import the component and configure it with your desired properties.

```
import { AavaProgressComponent } from "@aava/play-core";
```

Circular Progress

- Circular progress indicator with customizable size, color, and animation.

```
Angular Preview Code
```

```
<aava-progressbar [percentage] = " 25 " label = " 25% Complete " type = " circular " [svgSize] = " 100 " > </aava-progressbar> <aava-progressbar [percentage] = " 50 " label = " 50% Complete " type = " circular " [svgSize] = " 100 " > </aava-progressbar> <aava-progressbar [percentage] = " 75 " label = " 75% Complete " type = " circular " [svgSize] = " 100 " > </aava-progressbar> <aava-progressbar [percentage] = " 100 " label = " 100% Complete " type = " circular " [svgSize] = " 100 " > </aava-progressbar>
```

Linear Progress

- Linear progress bar with support for determinate, indeterminate, and buffer modes.

```
Angular Preview Code
```

Features

- Multiple Progress Types
- Circular Progress : SVG-based circular indicator with smooth animations
- Linear Progress : Horizontal progress bar with customizable height and styling
- Responsive Design : Automatically adjusts size based on screen dimensions
- Progress Modes
- Determinate : Shows exact progress percentage with smooth animations
- Indeterminate : Animated loading indicator for unknown progress
- Buffer : Shows both progress and buffer values (linear only)
- Query : Animated indicator for querying operations
- Customization Options
- Custom colors and themes
- Configurable sizes and positions
- Smooth animations with easing
- Accessibility features with ARIA support
- Performance Optimized
- OnPush change detection strategy
- Efficient SVG animations
- Optimized rendering and memory management
- Responsive resize handling
- API Reference

Inputs

- Property Type Default Description

Property	Type	Description	Default
percentage	number	Progress percentage (0-100)	0
bufferValue	number	Buffer value for buffer mode (0-100)	0
label	string	"Label text displayed with the progress bar"	
type	'circular' 'linear'	Type of progress indicator	'circular'
color	string	#2E308E	
mode	'determinate' 'indeterminate' 'buffer' 'query'	Color of the progress indicator mode	'determinate'
svgSize	number	Custom SVG size (overrides responsive sizing)	"12"
position	'12' '3' '6' '9'	Starting position for circular progress (clock positions)	'12'

Outputs

- Property Type

Property	Type	Description
progressId	string	Unique identifier for the progress element
circumference	number	Circumference of the circular progress (readonly)
dashOffset	number	Current dash offset for circular progress
errorMessage	string	Error message for invalid inputs
displayPercentage	number	Animated display percentage for linear progress
rotationAngle	number	Rotation angle for circular progress

Position Methods

- Method Parameters
- Description
- updateProgress() None Updates the progress display and animations
- writeValue() value: number Sets the progress value

ControlValueAccessor

- registerOnChange() fn: (value: number) => void Registers change

callback (ControlValueAccessor) registerOnTouched() fn: () => void Registers touched callback (ControlValueAccessor) CSS Custom Properties ■ The component uses CSS custom properties for dynamic styling: Circular Progress Properties ■ Property Description --progress-text-weight Font weight for progress text --progress-text-color Text color for progress display --progress-text-font Font size for progress text --progress-label-font Font size for progress label --progress-label-color Color for progress label --progress-label-line-height Line height for progress label --progress-label-weight Font weight for progress label --progress-transition Transition timing for progress animations --progress-indeterminate-animation Animation for indeterminate mode Linear Progress Properties ■ Property Description --progress-linear-height Height of the linear progress bar --progress-linear-border-radius Border radius for linear progress CSS Classes ■ The component uses CSS classes for styling and state management: Container Classes ■ Class Description .progress-container Main container for circular progress .linear-progress-container Main container for linear progress Progress Classes ■ Class Description .progress-background Background circle for circular progress .progress-bar Main progress circle/bar .progress-text Text display inside circular progress .progress-label Label text for progress .linear-bar Container for linear progress bar .linear-progress Main linear progress element .buffer-bar Buffer progress element .indeterminate-bar Indeterminate progress element .progress-percentage Percentage display for linear progress State Classes ■ Class Description .indeterminate Indeterminate animation state .progress-error Error message styling Best Practices ■ Progress Mode Selection ■ Use determinate mode when you know the exact progress Use indeterminate mode for unknown loading times Use buffer mode for operations with both progress and buffer (e.g., video loading) Use query mode for search or query operations Color and Styling ■ Choose colors that provide good contrast with the background Use consistent colors across your application Consider using semantic colors (success, warning, error) for different states Ensure accessibility with proper color contrast ratios Performance ■ Avoid frequent percentage updates for smooth animations Use appropriate animation durations based on the operation Consider using indeterminate mode for very short operations Accessibility ■ Always provide meaningful labels The component includes proper ARIA attributes Ensure sufficient color contrast Test with screen readers Responsive Design ■ The component automatically adjusts size on different screens Test on various device sizes Consider custom sizing for specific use cases Accessibility ■ ARIA Support ■ Proper role="progressbar" attribute aria-valuenow for current progress value aria-valuemin="0" and aria-valuemax="100" for value range Screen reader announcements for progress updates Keyboard Navigation ■ Focus indicators for interactive elements Proper tab order Keyboard-accessible progress controls Visual Accessibility ■ High contrast color options Clear visual indicators Scalable text and graphics Support for reduced motion preferences Browser Support ■ Modern Browsers : Full support for all features SVG Support : Required for circular progress CSS Animations : Required for smooth transitions ES6+ Features : Required for component functionality Change Detection : OnPush strategy support

```
<aava-progressbar
  [percentage] = "25"
  label = "25% Complete"
  type = "circular"
  [svgSize] = "100"
>
</aava-progressbar>

<aava-progressbar
  [percentage] = "50"
  label = "50% Complete"
  type = "circular"
  [svgSize] = "100"
>
</aava-progressbar>

<aava-progressbar
  [percentage] = "75"
  label = "75% Complete"
  type = "circular"
  [svgSize] = "100"
>
</aava-progressbar>

<aava-progressbar
  [percentage] = "100"
  label = "100% Complete"
  type = "circular"
  [svgSize] = "100"
>
</aava-progressbar>
```
