

Ui Components

UI Components Overview ■ UI Components are the foundational building blocks of our design system. Each component is designed to be reusable, accessible, and consistent across all applications. These components follow atomic design principles and provide a comprehensive set of UI elements for building modern interfaces.

- Inputs ■ Interactive elements that allow users to input data and interact with the interface.
- Display ■ Visual elements that present information and enhance the user interface.
- Data Display ■ Components for presenting and organizing data in various formats.
- Navigation ■ Components that help users move through the application.
- Overlay ■ Components that appear above the main content.
- Layout ■ Structural components for organizing page content.
- Feedback ■ Components that provide user feedback and status information.
